detail
complementing
every interior

The minimalistic design of Vectis draws inspiration from the style of American switches and sockets, presented in a refreshed, minimalistic form. Vectis brand is defined by its timeless and universal character, making it suitable for both modern and classic interiors. The modular nature of Vectis provides rich possibilities for combining colors, shapes, and frame textures with an extensive range of mechanisms, sockets, and logical sockets.

Handcrafted aluminum and precision in manufacturing are made possible by our own machinery park, paint shop, and the experience of our employees. We love our work, and the passion for minimalism and design is evident in every detail of Vectis products.

Every new project is a realization of our passion. The Vectis team is characterized by an individual approach to each project, empathy, and joy in co-creating your interiors.

installation boxes

round SERIES

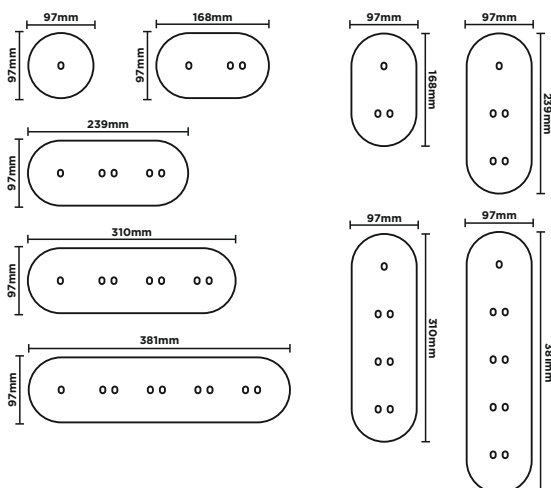

The circle has always been perceived as a perfect shape. The Vectis Round series is a response to its universal beauty and aesthetics. Industrial or loft interiors, modern, glamour, art deco, or japandi - Vectis Round will seamlessly fit into any project.

Similar to our other products, we offer a variety of frame, socket, and mechanism colors. Mechanisms are universal across three Vectis series: Square, Round, and Cube, providing rich possibilities for combining different frame styles and textures.

Vectis Round is electrical equipment designed for demanding customers who appreciate minimalism and the timeless character of interior design.

Dimensions

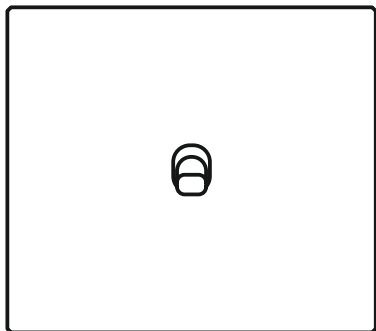

square SERIES

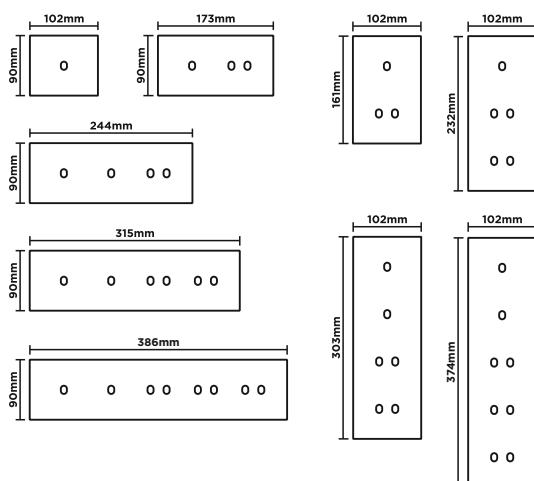

The first from the Vectis series, which is based on a rectangular, simple frame. The straightforward angles and classic frame shape provide endless possibilities for arrangement. Reference to window shapes, doors, and simple furniture forms guarantees a cohesive and timeless interior.

Similar to all Vectis series, we have a choice of basic shades of white and black, as well as brushed aluminum finishes - golden, aluminum, titanium, copper, bronze, or an antiqued gold color. Additional custom frame versions offer the option to paint them in the RAL and NCS color palette, providing infinite possibilities for playing with colors.

Minimalism doesn't have to be black and white, and the trend for colors in interiors is ever-present.

Dimensions

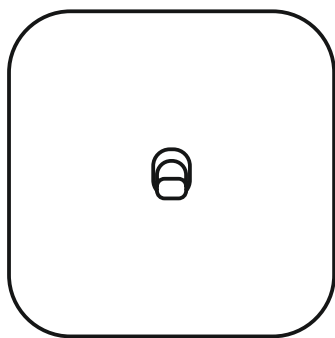

cube SERIES

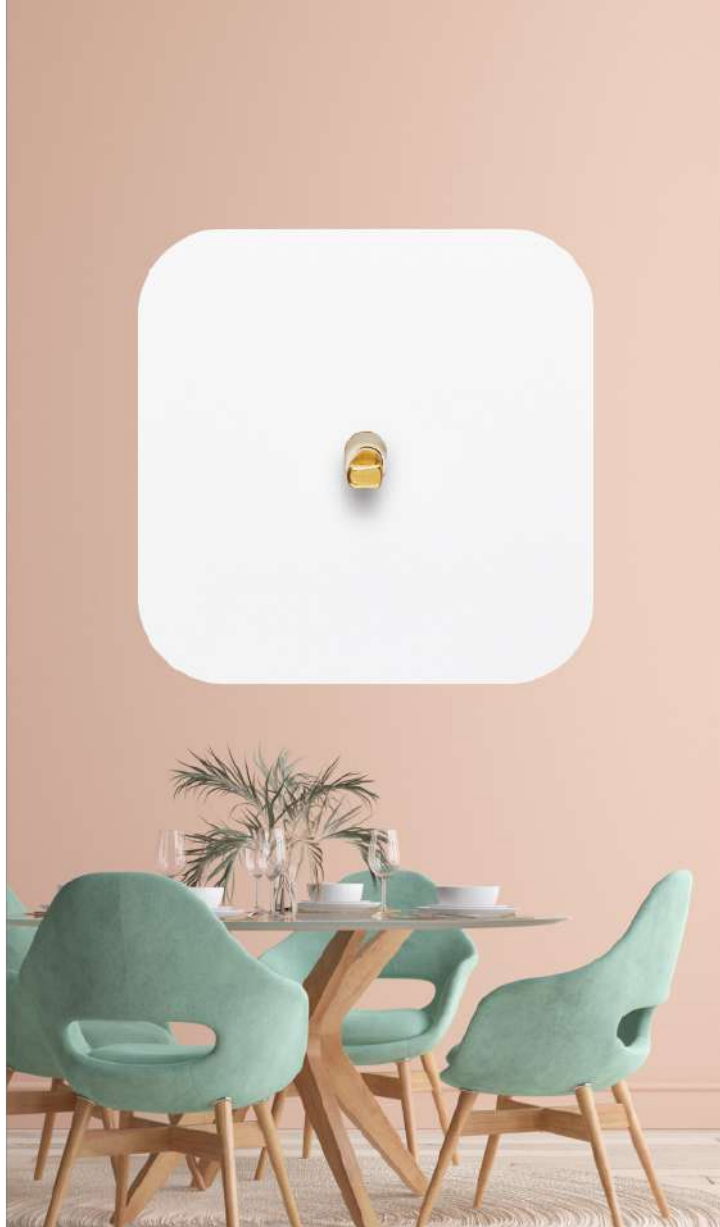

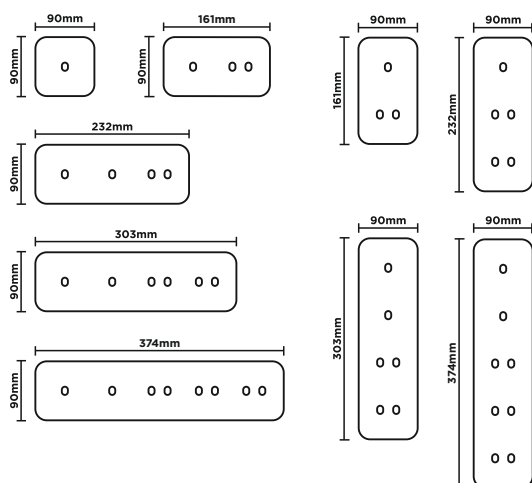

The youngest of Vectis, a combination of the Round and Square series. A rectangle with rounded edges was created as a compromise between these two series. Vectis Cube appears more lightweight and modern, yet it does not lose its minimalist character.

The inspiration for the new frame shape came from conversations and meetings with interior designers, clients, and design enthusiasts in Poland and around the world.

Vectis Cube looks perfect in both white and black, as well as in new RAL and NCS colors.
